

At first, I want to thank Ar. Abani Das sir for opening the Architecture college in Guwahati for which I could fulfil my dream & can now call myself as an Architect.

During my college life in G.C.A, I enjoyed my life to the fullest, worked very hard, enjoyed parties & could spend some time with my parents. This was only because we were asked to do everything in the class & not to carry any burdens at home. Each & every staff member was very cooperative & friendly. Friends were also very supporting. My friend circle was a group of 15 girls with whom I enjoyed a lot. Library books have helped me a lot in producing new designs. So, I advice my juniors to get through the library books at least for 15 min daily. If we had doubts, we would personally meet the teachers in the college & they would explain us very nicely.

Our college takes us for site visits, seminars, study tours, etc. We have functions in our college & we would celebrate each & every festival in our college with great joy. We treat each student as our brothers & sisters.

I was roll no. 1 & I was always bought at the first, in times of exams & submissions. So, one thing I can say to my juniors that if you are confident about what you are doing, then it does not matter what your roll no. is. The thing that matters is what you have done.

A part-time job is very beneficial during college life from 3rd yr. onwards. It helps you a lot. You can learn the differences of professional & college life. During viva-voce, practical knowledge helps you a lot which you can gain only by doing jobs.

Lastly, I want to say to all my junior friends that at the studying stage, money is not a matter. What it matters is learning & satisfaction of the work done by you. If you get a huge sum of money but you do not learn anything then it is of no use. So, i suggest to all my brothers & sisters that work in a place where you get money as well as knowledge. Do not run after money, let money come to you.
